

Overview of LYFFE White Paper

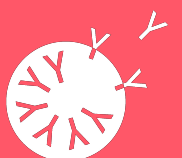

Introduction

LYFFE is a utility token that is the cornerstone of Lykke and our vision – to build a smooth and efficient alternative to the current financial system. We are building a freely available marketplace for digitized rights, assets, resources, data, and information that operates efficiently and fairly. Ownership of the LYFFE token gives users access to free services and will be leveraged as collateral for our new products and services, including our AI-powered real-time crypto forecasting tool, ATTMO.ai. Our goal is to create an exchange without fees, serving all types of investors, big and small.

We will implement our initiatives through a platform that enables a community of contributors to build financial services projects. Our platform, which is similar to collaborative environments such as GitHub, has a built-in innovative incentive allocation protocol based on the usage of the artifacts (code, datasets, insights). LYFFE is our ecosystem's utility token.

The services offered in Lykke's ecosystem are ATTMO.ai, liquidity provision, market-making algorithms, quantitative trading strategies, and software platforms for integration of our tools for enterprises.

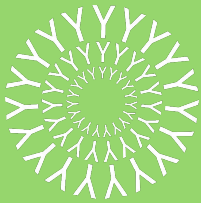

Current landscape

In the realm of finance, the blockchain and crypto movement offers a promising alternative for shaping a new financial landscape. However, challenges persist as blockchain technology grapples with issues tarnishing its reputation. Cryptocurrencies and tokens are, for instance, being used for short-term gains and sudden sell-offs. This has raised concern and impeded on the widespread adoption of crypto assets among both individual and corporate investors.

Lykke uses tools that address these issues, namely smart contracts and big data analytics. Our technology facilitates the establishment of a more resilient and inclusive financial ecosystem.

Lykke's solution

Lykke is a pioneer in the digital asset marketplace. The company offers high-frequency trading and market-making, as well as predictive technologies, which have laid the foundation for a resilient exchange with zero transaction fees and supported by an array of decision-support services.

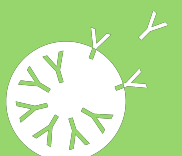

In today's landscape, technological advancements pave the way for the development of a new and improved approach to financial services, all rooted in the visionary insights honed by Richard Olsen, Lykke's founder, who has decades of market experience. His track record of pioneering innovations and transformative paradigm shifts sets the foundation for this forward-looking evolution.

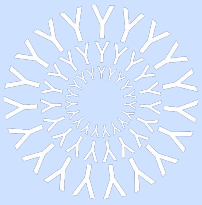

LYFFE, our new utility token, will serve as an instrumental tool to fuel the organic growth of the Lykke exchange and its offering. We plan to expand our product offering step-by-step in line with our vision – a smooth and efficient marketplace.

The core feature of the Lykke exchange is to enable trading decisions with ATTM0.ai, the AI-driven crypto forecasting service, and to provide liquidity with our market-making solutions.

Lykke will expand the coverage of its exchange from the major tokens to the growing number of emerging tokens seeking a quality exchange. The goal is to enable new tokens to onboard and get liquidity without being subjected to price manipulation and other malpractices.

We will expand the Lykke exchange into a "crowd-based" platform that maximizes the benefits of collaborative work. This will speed up the implementation times of new tokens and accelerate the introduction of new protocols and instruments. We will emulate operational practices that are successful in open-source projects and other initiatives such as Wikipedia.

The building blocks of Lykke

The Lykke crypto exchange with free trading for cryptos, stablecoins, and utility tokens with fiat on/off ramp.

A listing process, onboarding new tokens and blockchains on the Lykke exchange.

The market-making of new tokens, where the issuers of new tokens will use Lykke's market-making solutions. Tokens are rated based on the available liquidity. The market-making and supporting tools are designed to develop a solid community and investor base over time. We will attract liquidity from our community and investors, and deploy it for market-making of major and emerging tokens, solving the key challenge of lack of liquidity in the crypto industry.

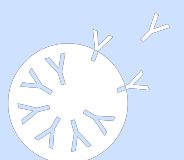

ATTMO.ai, our AI-based cryptocurrency prediction service, analyzes all covered crypto tokens in real-time, to detect the market trend of the crypto market as a whole and uncover malpractices. Newly listed tokens will also be covered. ATTMO.ai serves as a decision support tool for professional and retail traders, with detailed risk information that provides optimal conditions for their trading. The tools foster a good ecosystem of market participants trading the covered crypto tokens. ATTMO.ai will be a key solution to attract liquidity and volume to the Lykke exchange.

Our news coverage, ATTMO Times, provides daily news coverage of the crypto tokens listed on the exchange, including useful background information. ATTMO Times is an unbiased and neutral marketing tool that enables investors to understand and evaluate investment opportunities and make the right trading decisions.

Lykke blockchain is a blockchain operated by individual validators all verified via NFC Chip scans of passports. Initially, Swiss citizens and entities are the validators of the Lykke blockchain; the design builds on the heritage of Switzerland as a neutral country and brings the heritage of private banking to the world of blockchain. The Lykke blockchain will be the native coin of LYFFE. The plan is to expand it, to include validators from other countries that uphold a rule of law.

Crowd intelligence, by setting up tools and services to rate projects and evaluate their potential, through the insights of the people involved in Lykke's decentralized autonomous organization (DAO).

In summary, the Lykke project's competitive edge is designed to achieve cost efficiency at all levels, by using innovative engineering and testing new forms of collaboration. The whole organization is science driven. This is our guiding principle for decision-making and how we grow our ecosystem.

Tokenomics

The total supply of LYFFE is 2,334,096,100. All LYFFE utility tokens are minted upfront.

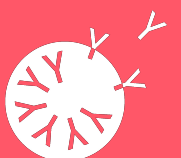

LYFFE tokens will be burned as they are consumed by users. Lykke will conduct strategic airdrops for loyal and engaged users.

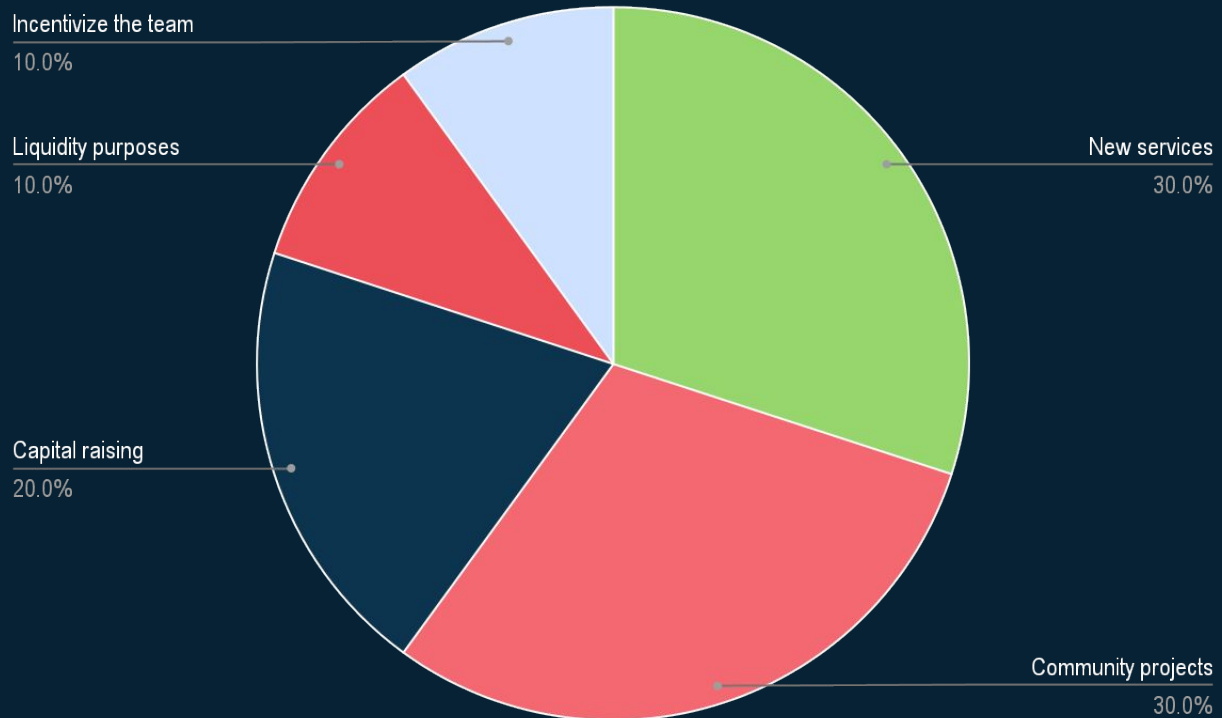

LYFFE's uses

Owners of LYFFE use their tokens to get access to additional services, such as ATTMO.ai's trading signal and risk management services; there will be different service levels scaled according to the number of LYFFE held by the user.

The LYFFE utility token can also be used to tokenize and pay for all products and services offered by Lykke and its affiliates, this includes custody, listing fees, B2B platforms like Sakura and Aerial, and more. As the tokens are used, they are burned.

Additional use cases for LYFFE will be introduced step by step, including airdrops, custody, staking, insurance of new tokens including stablecoins, CO2 tracking, and vouchers for services in an array of tokenized real world assets (RWAs). Early funding for new initiatives, products, and services is also planned. Again, LYFFE tokens will be burned on an ongoing basis, generating added value.

Allocation of the LYFFE tokens

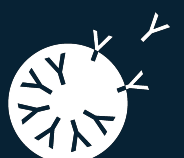

30% of all tokens will be used for the launch of specific services. Examples are ATTMO.ai signal and risk management service, custody, staking, CO2 offset, market-making services, insurance, and utility tokens in different currencies. Tokens will be burned after being spent and then reissued for renewed use.

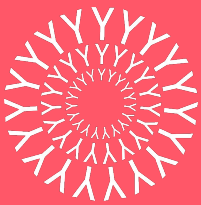

30% will be allocated to the funding of community projects proposed by the LYFFE holders, who stake coins to document their intent. A DAO framework will be launched to make project initiations simple, straightforward and to ensure efficient product delivery. The LYFFE that has been allocated to a particular project will be staked. They will be released once the project reaches its milestones.

20% will be set aside for capital raising, which will be spread out over the full development cycle of Lykke. A major focus will be on maximizing diversity of holdership to get a broad backing of diverse supporters.

10% will be allocated for liquidity purposes.

10% will be allocated to incentivize the team and its core contributors.

Roadmap

The launch of the LYFFE utility token fills a gap in Lykke's offering. The time is now ripe to launch it.

Phase 1:
LYFFE token is listed on Lykke exchange and its retail wallet Pocket.
LYFFE will be used to access the buy and sell signals on ATTMO.ai.
LYFFE will be introduced for custody and staking services.
LYFFE will be launched on the first centralized exchanges (CEXs).

Phase 2:
The launch of a collaboration platform to ideate, develop, and execute development projects. Its focus will be on enhancing the existing building blocks and executing on creating an open-access exchange.

The development of a listing platform of new tokens and cryptocurrencies on our exchange. This includes screening tools to vet new projects and where necessary, the raising of seed liquidity for these new instruments.

Phase 3:
The launch of a DAO framework, enabling community members to initiate product enhancements and new projects.

Phase 4:
The initial release of the Lykke blockchain with Swiss citizens as validators.

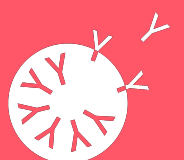

Fundraising

The primary purpose of LYFFE is to provide our users with innovative products and services. Whenever the tokens have been spent by users, they will be burned.

The tokens will initially be listed on the Lykke exchange and secondly on third-party CEXs and DEXs.

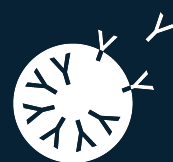

LYFFE will be released gradually, as its price appreciates. We do not sell tokens nor make initial public sales, as we want to take full advantage of the upfront investment that has been made at LYKKE. The main purpose of LYFFE is to activate the community and to have an efficient means to bring its innovative products and services to the market.

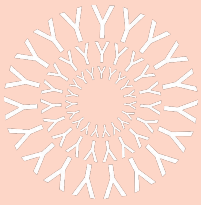

At launch, the price of one LYFFE is USD 0.01 with a market cap of USD 23.34 million.

Appendix

Risk factors

LYFFE is a utility token. It does therefore not provide any ownership rights in any form. Its intrinsic value depends on the overall performance of the services rendered by Lykke and the ongoing contribution of the Lykke community.

Negative economic events at a macro level, within the crypto community or Lykke itself will impact the value of LYFFE and may make the token worthless. Holders of LYFFE need to be aware that this is in no way a security token and that its intrinsic value exclusively depends on the perceived value of the services rendered by Lykke and its affiliates.

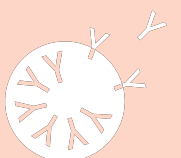

Conclusion

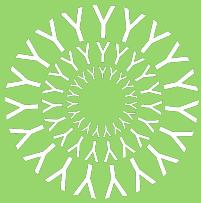

The primary purpose of LYFFE is to provide our users with innovative products and services. Whenever the tokens have been spent by users, they will be burned.

The tokens will initially be listed on the Lykke exchange and secondly on third-party CEXs and DEXs.

LYFFE will be released gradually, as its price appreciates. We do not sell tokens nor make initial public sales, as we want to take full advantage of the upfront investment that has been made at LYKKE. The main purpose of LYFFE is to activate the community and to have an efficient means to bring its innovative products and services to the market.

At launch, the price of one LYFFE is USD 0.01 with a market cap of USD 23.34 million.

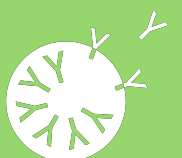

OUR TEAM

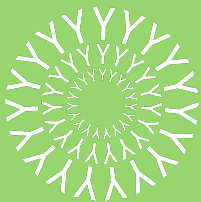

Richard Olsen (Lykke's founder)

Richard is a serial entrepreneur, who notably co-founded OANDA. He has spearheaded groundbreaking work in high-frequency finance, and among other things co-authored the influential book "Introduction to High-Frequency Finance." Drawing from his expertise in high-frequency finance, blockchain technologies, and applied economic research, Richard leads the charge in driving radical innovation within global monetary systems. His founding of Lykke reflects a bold mission: to democratize access to global financial markets, fostering connectivity one transaction at a time.

Eugen Barbu (high frequency trading and market microstructure, invited contributor)

Eugen brings over 16 years of expertise in quantitative trading within forex markets. His extensive background includes developing sophisticated autonomous trading models and analyzing large datasets using advanced quantitative and machine learning methodologies. He is an expert in market microstructure and price formation, and recently started to explore applications of generative AI to financial data. Moreover, his prior role as managing director at a leading investment bank enhances his technical prowess with valuable leadership and management experience.

OUR TEAM

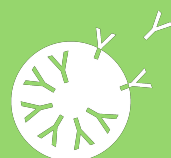

James Glattfelder (high frequency trading and market making)

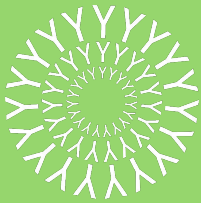

James is a quantitative researcher, author, academic, and entrepreneur. He holds an M.Sc. in theoretical physics and a PhD in the study of complex systems. His research focuses on decoding complexity and the metaphysics of existence, and he is concerned about societal and environmental issues. For over a decade, James worked as a quantitative researcher, both in traditional finance and in the distributed ledger ecosystem, where he was involved in various startups. His book "The Sapient Cosmos: What a Modern-Day Synthesis of Science and Philosophy Teaches Us about the Emergence of Information, Consciousness, and Meaning" will be released later in 2024.

Anton Golub (DAO, Real-World Assets, market making)

With over a decade of experience in the crypto and Web3 space, Anton is a global entrepreneur, company founder, and innovator who is passionate about building innovative solutions for the decentralized economy. Anton has co-founded and led four successful ventures in the crypto ecosystem, ranging from market-making, exchange, and investment platforms to technology hubs and DAOs. He is an advisor and venture partner at Full Stack VC, a venture capital firm that invests in early-stage Web3 startups, and the founding member and chairman of SwissAssetDAO, a DAO that enables crypto-native companies to access RWAs.

Previously, Anton founded and served as CEO of flovtec, a Swiss market-maker that provided liquidity solutions to digital asset exchanges, token issuers, and protocols. He also co-founded Trust Square AG, a blockchain technology hub in Zurich, and Lykke, a blockchain-powered exchange. Anton has a strong background in quantitative trading, machine learning, and decentralized finance (DeFi), and has authored multiple publications and books on algorithmic trading and market microstructure.

OUR TEAM

Tom Houveling (ATTMO)

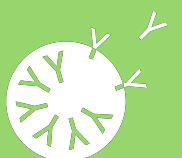

Thomas is a highly qualified professional with a background in psychology and a PhD in cognitive neuroscience, where his research concentrated on the intricacies of sound perception and speech recognition. In his current role as data scientist, he developed a keen interest in applying mathematical tools to comprehend and predict financial market behavior. His specific focus lies in leveraging Fourier-based transformations and exploring fractal phenomena to gain insights into the complexities of financial markets.

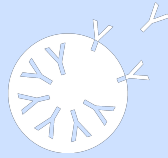

Mikhail Nikulin (technology expert, invited contributor)

Mikhail is an independent technology expert who stands out as an invited contributor. As the co-founder of Lykke, Mikhail played a pivotal role in its launch, serving as the CTO and leading the development of the Lykke exchange until 2018. Back then, he launched Idena, the first human-centric blockchain protocol with democratic principles. Today, Idena stands as one of the most decentralized proof-of-person protocols, boasting a diverse network of validators and serving as the designated identity provider for Gitcoin (the largest funding platform for open-source projects in Web3). Mikhail's core values of decentralization, privacy, and democratic principles are deeply complemented by his profound expertise in blockchain and AI technologies, driving innovation at the intersection of these domains.

Danijela Tomić (community manager)

Danijela has extensive experience in the crypto space, where she has worked in various roles, including content creation, social media marketing, and community management. With a keen eye for emerging trends and a passion for blockchain technology, she is dedicated to delivering valuable insights and fostering engagement within the crypto community in a way that is understandable to everyone.

Our vision for the future

A technical white paper by Lykke's founder, Richard Olsen will be published in a special edition of the Journal of Econometrics by the end of April. Links to other research papers published by Olsen on this topic can be found below:
